PG&E WEB SITES and Contact Information:

Tree Hazards

Contact PG&E and Davey Tree (if they are the contractor doing the work for PG&E) to remove/prune trees that may fall into power lines and/or to return to properties to remove down trees they previously cut or at least to cut up and spread so that it doesn't cause soil/slope issues or create a fire hazard in the future.

PG&E number for residential property inquiries is 800-743-5000

PG&E contracts with various tree services for work done in and around their lines such as Davey Tree Resource Group who has done a lot of the work on CZU fire damaged properties. According to the Davey Tree website, their customer service number regarding clearance around lines is 866-666-5526 and their local field office number in Soquel is 866-918-7515.

Community Tree Service also does a lot of work for PG&E so they may also be a tree service to contact.
